- Extensive range of sizes and colours
- Visual appeal effect
- Effective exfoliation
- Non GMO
- Non BSE
- Organic grade available on request. The coating technology used by Lessonia is qualified for organic cosmetic products
- Excellent skin tolerance.

EXFOLIATOR BEADS DESCRIPTION

Exfoliator Beads are free-flowing, hard and smooth exfoliant particles. They improve the colour of cosmetic products, enliven the finished product's appearance and provide gentle and effective exfoliation to the skin.

Exfoliator Beads bring better benefits than polyethylene as they are biodegradable, natural and gentle on the skin.

Exfoliator Beads bring big bold colour into formulations.

SPECIFICATIONS

- **Shelf life** : 24 months
- **Bacteriological status** :
Total aerobic plate count < 200 germs/g
- **Yeast & Moulds** < 10 germs/g

IMPORTANCE OF COSMETIC EXFOLIATION

The principle is to boost cell renewal, skin radiance and skin micro-circulation thanks to exfoliating agents. Because of stress, exhaustion, UV, hormones, age etc, skin becomes duller and loses radiance. The consequences are flaws, irregular skin grain, disorganised skin structure etc...

Scrubbing action is an essential solution in order to :

- prepare the skin to the different adapted treatments, removing dead cells which clog the skin, making it dull and limiting cell exchange.
- reactivate micro-circulation (mechanical action).
- stimulate cell renewal by reducing thickness of top layer of skin cells thus stimulating cell homeostasis.
- homogenise, regulate and soften the skin surface.
- improve radiance and light reflection as the skin is smoothed, made uniform, freed from excess sebum.

> Lessonia meets this aim of cosmetic exfoliation by offering new treatment concepts. Exfoliator Beads deliver both : visual and tactile activity. Exfoliator Beads are uniformly sized to optimally remove dead corneocytes from the skin surface.
